# Hospitals are commercial

All private hospitals have full strategy to earn money. They know mentality of reach people that by good facility handsome amount can be earned.

Even Hospitals have marketing department like a private company which prepare business enhancement scheme every year.

Some hospitals have their own medical stores in same hospital and who doesn't know the handsome turnover of a medical shop, we can understand the intension behind it.

Some hospitals are incorporated in form of company like Pvt. Ltd. And what does it mean, Its crystal clear that it is completely commercial.

# Hospitals are social?

Facilities are always respected and private hospitals are much aware about it and if it's a public demand then how can we blame it a commercial?

We all know that medical fields have very costly machineries and we should not forget that these machines which give immediate and accurate results are not cheap.

Some hospitals conduct free medical check up camp for poor people also and it's a pure social symbol.

Hospitals provide all facilities and services for public welfare and if in some amount human lives can be saved then its more social than commercial.
